

FIX Adapter

Connect Third-Party Trading Systems to the TT Order Entry Platform

Accuracy. Stability. Speed.

These are the hallmarks of the X_TRADER platform from Trading Technologies (TT).

TT pioneered the development of electronic derivatives trading. Loaded with innovative features, supremely reliable and reflex-fast, TT's X_TRADER platform is the front-end screen of choice for professional derivatives traders around the world. In fact, TT estimates that over 50 percent of the combined electronic volume on the world's six leading derivatives exchanges moves through the X_TRADER platform.

TT provides connectivity to the primary derivatives exchanges through the world's major global clearing firms. As a futures trader, you can use the X_TRADER platform to trade derivatives in virtually any market.

Some of the world's most successful traders depend on X_TRADER to manage their trades. Do they know something you don't know?

See what you've been missing. Contact a Trading Technologies representative and harness the extreme performance of X_TRADER.

What is the FIX Adapter?

The TT FIX Adapter enables non-TT systems to connect to TT's trading platform using the industry-standard Financial Information eXchange (FIX) messaging protocol. This means that order management systems, algorithmic black boxes, and third party front-ends can easily connect to the TT infrastructure for high-speed order routing, risk management, position monitoring and market data services. As the world's leading electronic trading protocol, FIX is integral to many order routing and trading platforms. TT's commitment to FIX connectivity ensures that customers can gain the benefits of TT's high performance order routing infrastructure across their entire spectrum of internal and third-party trading systems.

Benefits of TT's FIX Adapter

- Provides an open, industry standard FIX interface
- Runs seamlessly on Windows® 2000 and XP
- Leverages TT's high-speed gateways for market data and order routing to global derivatives and cash markets
- Allows you to focus your efforts on trading rather than maintaining exchange connectivity
- Maximizes your investment in existing trading applications and systems
- Enables advanced order execution, including spreads and strategy trading
- Supported by a dedicated team of FIX specialists
- Free development support and conformance testing

Speed

TT has earned a reputation as the market leader when it comes to speed. TT's FIX Adapter provides the same ultra-low latency as all TT products. TT's robust FIX Adapter can process exchange price feeds in real-time without sacrificing speed or capacity.

Flexibility

TT's FIX Adapter allows Futures Commission Merchants (FCMs), banks and other organizations to connect existing order routing systems and third-party front-ends with TT's exchange gateways. You can use the FIX Adapter to request security definitions and market data, including last trade, high, low, settlement, open, close and market depth. You also can configure the FIX Adapter as a back office feed, ignoring orders and market data while forwarding execution data from the exchange to the back office. The FIX Adapter interfaces with TT's risk management system for monitoring and managing real time risk limits on all orders placed through the FIX Adapter.

Support

TT has a dedicated team for supporting FIX Adapter customers. Our Development Technical Support (DTS) team will consult with you throughout your development cycle. They are available to work closely with you to most effectively integrate the FIX Adapter with your trading and back office systems. The DTS team also can help you with conformance testing to ensure that your applications are fully integrated with TT's gateways and applications. And best of all, this support is provided at no additional charge to all FIX Adapter clients.
